LPI has more than 500,000 exams, with professionals certified by LPI in 180 countries and counting. LPI currently offers three credentials aimed at system administrators: Lpic-1: Linux Administrator – the LPIC-1 credential is the first step in the LPI administrator’s career. This credential validates your ability to perform lower-level maintenance tasks (backup and restore, restart, shutdown); understand the basic administration tasks, Linux, GNU and UNIX; install Linux workstations; manage access permissions; and understand the basic architecture of the system as it relates to Linux. Lpic-2: Linux Engineer-The LPIC-2 targets Linux professionals who administer mixed networks for small and medium-sized organizations. Successful candidates perform advanced administration tasks, manage block storage, manage firewalls and VPNs, maintain system security and authentication, configure network services, supervise team members and evaluate options, and provide recommendations for management science. Lpic-3 Linux Enterprise Professional-The LPIC-3 targets three specializations: mixed environments (LPIC-3300) -targets professionals working with Samba, Openldap and Windows and Linux Clients Security (LPIC-3303) – “Focuses on virtualization of security and high-security issues availability (LPIC-3304). LPI’s professional credentials are progressive, with each credential taking lower-level certification as a pre-req. There are no pre-reqs for LPIC-1 certification. Two exams are each required to obtain the LPIC-1 or LPIC-2 credentials. The specializations of the LPIC-3 require one exam each. Each exam costs \$200, includes 60 multiple-choice questions and must be completed within 90 minutes. Lpic-1: Linux Administrator-To obtain the LPIC-1 designation, candidates must pass two exams: Exam 101-400-validates an applicant’s knowledge System Architecture, Linux Linux and Management of Packages, Commands, Devices, Linux and System File Systems of the GNU System and File System Hierarchy 102-400-Motes of Shells, Scripts and Data Management, User Interfaces and Desktops, Administrative Tasks, Essential System Services, Fundamentals of Networking and Security Lpic-2: Linux Engineer-Applicants must pass two exams to obtain the LPIC credential-2. Exam 201-450-Covers capacity planning, Linux kernel, system boot, file systems and devices, advanced storage Device administration, network configuration and system maintenance exam 202-450-focuses on Domain Name Servers (DNS), web services, File sharing, network client management, email services and LPIC-3 system security specialties- LPIC-3 credentials require a single specialized exam: LPIC-3300 Mixed Environments- Candidates need to pass the 300-100 Exam, which covers the configuration and management of Openldap and Samba, as well as working with Linux clients and Windows. Lpic-3303 Security Candidates need to pass Exam 303-200, which covers encryption and access control along with application, operations and network security. LPIC-3304 Virtualization and High Availability – Candidates must pass the 304-200 Exam, which aims at virtualization, high availability cluster management and high availability cluster storage to obtain the credential. In the LPI market, you will find numerous training options, including Livestyons (learning videos), certification guides, eLearning courses and access to laboratories. Most materials cost less than \$300. You’ll also find study guides and training resources on Amazon. CompTIA’s infrastructure career path begins with skills certifications and culminates in three advanced credentials infrastructure: server+, Linux+and Cloud+. According to CompTia, the server credential+ äThe industry’s only certification that covers the latest server technologies, including virtualization, security and storage attached to network.ä network.ä The holders are well qualified in concepts and technologies related to the server, including architecture and administration of servers, storage, virtualization, security, problem solution, network and recovery of disasters. You will find the holders of credentials Compia Server+ working for companies such as Intel, Lenovo, Microsoft, Xerox, HP and Dell, in function as a server or storage administrator, liner support to the server or tonic SERVICE. Since this is a neutral credential in terms of suppliers, it can be used as a trampoline for supplier’s specific credentials. Certification Compstia Servers+ does not need to be renewed. Candidates must have gained the credential of the foundation and 18 months of experience in you recommended. It is necessary to be an examination (SK0-004) to obtain the credential. With a US \$ 302, the exam consists of 100 Questions of Mother Top Choice that candidates are at 90 minutes to complete. The exam targets the domain of the following concepts: virtualization, storage, security and problem solution. Compia offers candidates in many learning opportunities, including and -books and formal classroom training. In addition, candidates can buy one of Compia’s learning packages: the luxury versions (\$ 389) consists of an exam voucher, a resumption voucher and access to the interactive elearning tool of Compia, Certmaster ; The Premier Bundle includes everything in the Deluxe package, in addition to the Official Compstia Study Guide for server+ in and -book format. You will also find vain preparation guides for exams in the Amazon. It is difficult to think about the "virtualization" and do not think about VMware. Since its innio in 1998, VMware has become a globally recognized virtualization and transformation of data center. VMware offers two Virtualization Credentials of Data Center Certified Professional (VCP) (DCV), one for the 6 (VCP6-DCV) and one (VCP6.5-DCV) for VSphere 6.5. The VCP-DCV credential validates a candidate’s ability and experience implementing, managing and troubleshooting problems and their ability to follow and recommend best practices. The VCP6-DCV is the most popular VMwareÄYÄ’s certification, with more than 100,000 certified professionals worldwide. Due to the popularity of VMware, itÄ eÄ’s anticipated that VCP6.5-DCV will also be in demand as companies migrate to the latest version of vSphere. This article focuses on the requirements for VCP6.5-DCV, since it’s based on the latest version of vSphere. The requirements to obtain the VCP6.5-DCV depend on the experience and certifications of an applicant. Before attempting the exam, all candidates should gain practical experience using vSphere 6.5. No VCP certificate or expired certification Ä eÄÄÄÄÄ Ä Ä Candidates must attend an approved training course and pass two required exams. Applicants can expect to pay around \$4,250 for an on-demand training course. VCP5-DCV or VCP6-DCV is highly recommended. formal training is not required. Candidates only need to pass a single exam to earn the credential. VCP active in another track ÄeÄÄÄÄ Staff Candidates need to pass a single exam. Training is recommended, but not necessary. Exam requirements depend on an applicant’s experience and active VCP certifications: no VCP certification or expired certification is required to pass one of the foundation level exams (vSphere 6.5 or vSphere 6) and pass the VCP6.5-DCV exam. The foundation exam costs \$125 and the VCP6.5-DCV exam costs \$250 for a total of \$375. Each exam has 70 questions and lasts 105 minutes. VCP5-DCV or VCP6-DCV is required to pass the VCP6.5-DCV or VCP6.5-DCV Delta exam to obtain the designation. The fee for each exam is \$250. Active VCP in another track ÄeÄÄÄÄ Ä Ä Applicants must pass the VCP6.5-DCV exam (\$250). VMware maintains a comprehensive network of learning resources.
